TITLE:

**THE INFLUENCE OF SCHOOL DROP OUT ON THE ACADEMIC  
PERFORMANCE OF LEARNERS: CASE STUDY OF EMUHAYA  
DISTRICT OF KENYA**

BY

**CHEPKIRUI JOYCE BII  
BED/21085/81/DF**

SUPERVISED BY:  
**REV. ERICH KASIRYE**

A RESEARCH REPORT SUBMITTED TO THE INSTITUTE OF OPEN AND  
DISTANCE LEARNING IN PARTIAL FULFILMENT OF THE AWARD OF  
DIPLOMA OF EDUCATION OF  
KAMPALA INTERNATIONAL UNIVERSITY.

**MAY 2010**

**DECLARATION**

I, CHEPKIRUI JOYCE BII, BED/21085/81/DF

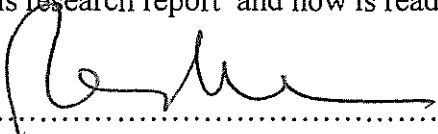

do declare that the information given in this research report is made by myself and has never been presented by any other person, for the award Diploma of Education.

Signature:.....

Date:.....14/4/2010.....

**APPROVAL**

This is to certify that CHEPKIRUI JOYCE BII, DPE/21085/81/DF has successfully completed her / his research report and now is ready for submission with my approval.

Signed: .....  .....

REV. ERICH KASIRYE  
KIU SUPERVISOR

DATE..... 14/4/2012 .....

## DEDICATION

This report has been dedicated to my beloved husband Jonathan Bii for his enormous support, encouragement and prayers while I studies far from home.

## ACKNOWLEDGEMENT

I would like to thank the Almighty God for giving me the strength and courage to compile this research report. Without God, this research would not have seen the light of the day!

Special thanks go to my supervisor, Rev. Eric Kasirye who was a good mentor and advisor during the compilation of this work. My appreciation also goes out to the Administration of Kampala International University for their support during this exercise.

Lastly and most importantly, to my family members, my children Allan, Amaris, Aileen and Angela, friends and colleagues who have been prayerful and close to me and supportive in this noble work.

May God reward them abundantly.

## **ABSTRACT**

The purpose of the study was to examine the impact of school drop out on academic performance of learners. The objectives were to establish the relationship between school drop out and academic performance of learners. The study also examined the causes of school drop out among learners.

The study used across -sectional survey design to analyze both quantitative and qualitative. The researcher collected data from 3 schools with a population of 150 respondents.

The researcher used a questionnaire instrument, observation and interview guide to collect data.

The findings indicated that majority of the learners drop out of schools due to poverty, family breakdown, hunger, bad school experience, peer influence and diseases. The findings also indicated that learners who drop out of school come from divorced families and single headed families which greatly contribute to school drop out.

The study recommended the government of Kenya to emphasize on free primary education and to support the learners from very poor families with basic need such as food et.c. The schools should also support learners with necessary reading materials such books to enable their stay in schools.

**CHAPTER ONE**  
**INTRODUCTION**

**1.0 Introduction.**

This chapter presents the background to the study, problem statement, purpose, objectives, research questions, questions, scope and significance of the study.

**1.1 Background of the study**

Primary schools, drop out rates are highest o\at one for both boys and girls and the 4<sup>th</sup> grade, about a quarter of the initial cohort has dropped out of school. Starting with the fifth grade, about a quarter of the initial cohort has dropped out of school, presumable due to pregnancies, early marriage and demands for household cores. Of those countries where dropout rates are disaggregated by gender Namibia and Kenya indicate a near equal dropout rates for boys and girls. These national averages may indeed hide regional and rural/ urban discrepancies but we had no data to prove this.

Koroto zone is located in Vihiga District of Western Province. The zone has a total population of approximately 35000 people. It is the least populated zone in the district of Vihiga and the zone accommodates different people form different t parts of Kenya. This zone has experienced high rate of school dropout as a result of disability, race

ethnicity, illness, poor learning environment, poor attitude and lack of school fees and which has greatly affected academic performance of learners.

## **1.2 Statement of problem**

There is an increase in the number of pupil's school dropout in East zone in Emuhaya division, Emuhaya district -Kenya and this rate is quite alarming to the government and the residents in general plus the parents who own the pupils. The rate of school dropout has been attributed due to lack of school fees, illness, poverty and corporal punishment which has greatly affected learner's academic performance.

## **1.3 Purpose of the study**

To examine the impact of pupils school dropout and academic performance.

## **1.4 Objectives of the study**

To examine the causes of school dropouts among pupils

To examine the impact of school dropout on academic performance

To examine the challenges faced by pupils at school.

## **1.5 Research question**

What are causes of pupils' drop outs?

What are impacts of school dropout among pupil on academic performance?

What are the challenges faced by pupils at school?

### **1.6 Significance of the study**

The research will help policy come up with appropriate policies for solving the problems of pupil's dropout.

The research findings will boost the documented literature resource of Kampala International University.

The study will add on already existing literature of school dropout and academic performance.

### **1.7 Scope of the study**

#### **1.7.1 Content Scope**

The study covered the impact of school dropout and academic performance. Independent variable is school dropout and dependent variable is academic performance.

#### **1.7.2 Geographical Scope.**

The study covered Emuhaya division, Emuhaya District Kenya.

## **CHAPTER TWO**

### **LITERATURE REVIEW**

#### **2.0 Introduction**

This chapter included looking through the earlier research documents: literature with an aim of identifying a problem of concern eventual number of duplication of early research work is done. A part from going through other related work. It also involved critically going through other services of materials that are related with the research topic.

#### **2.1 Causes of school dropout**

##### **Hunger**

Hunger and poor diet among children continue to be a key reasons for truancy in many remote villages in Kenya, according to local non-government organizations (NGOS) working in the education sector.

Food shortages have always been the cause of children not being able to attend school regularly, said school teacher Mr. Otieno John who teaches in the government-run primary school in Nyanza province. There are many poorest villages in poverty stricken Kenya district with less than US\$ a day, according to Sim, a local NGO which focuses on helping rural communities Srivastava explained that Kenya villagers, like many others in East Africa, are unable to produce sufficient food and cannot afford to buy food for their children.

“How can they continue to attend class when they are hungry all the time? Asked Mr. Ouma a school teacher. Ouma said on average 10-15 percent of students aged 10-14 in the area dropout every year before completing primary school.

This situation is typical of many remote villages in country, where 14.5 percent of primary level students in grade 1-5 dropouts every year, according to ministry of Education.

## **2.2 Break down of families**

Students in broken homes are more likely to drop out of school than those with families intact (Schwartz, 2003) this is so because of the fact that this is another stressful matter these young minds must also deal with. Home and school stability is another cause to for students dropping out of high school. More than half of dropouts have moved within their four years of being in high school ( Schwartz 2003)

If a student does not have stable school life, then they are more likely to drop out of school stableness allow the student to feel comfortable enough to try work at school. If they have a stable home and school life, then that is one less worry for them. This allows them to concentrate on staying in school instead. The more stable a situation is, the better they get along with teachers and students, and the easier it is' for them to fit in the work hard at school.

### **2.3 Poverty**

This is expressed as lack of money to meet school expenses ( even countries like Malawi Tanzania and Uganda who have forms of free education for primary schools) and just the need to leave school in order to work and earn some money. The next important reason for girls is pregnancy (almost 10% of total number of dropouts in Tanzania), followed by demands for household chores and the need to work on the farms in varying degree for different countries. Lack of interest is given as an important factor for dropping out of school and not re-entering; especially in Malawi. This could be an indication of school environment factors that are not conducive to learning and staying in school.

### **2.4 Poor facilities at school**

Poor facilities at school, long walking distances to school and lack of road access have combined with poverty and hunger among children in remote areas to exacerbate the problem, according to NGOS over a million children out of school. 'How can we ever motivate parents to send their poorly fed children to school? Asked school teacher. Teachers often get blamed for failing to keep children at school, but the real reason has always been poverty and food insecurity, food is the answer to their regular attendance but work can't afford, said Benson.

## **2.5 Bad school experience**

Bad school experience is also a large contributor for the school rate. A large majority of dropout students were only taking the bare minimum general high school requirements. This is because no one pushed them to try harder. This make students feel that school was not important enough to try hard at. These students then do not even care because they do not think school is important (UNESCO 1997). These students also said they did not have much attention given to them when dealing with their school work.

This also emphasized that school was not important. A large majority of dropout students were held back grade at least once in school life. This makes many students feel as they are not as smart as the other students, so why even bother (Schwartz 2003, p:43,56)

## **2.6 Social behavior**

Social behavior is a cause for students dropping out of high school to begin school. Most students who drop out of school they do not like school to begin with. They may have had disciplinary problems. Great portion of dropout students are suspended at one time or another, frequently absent students also make them more likely to drop out. A good deal of drop out students had even been previously arrested (UNICEF/ESARO.1999)

This is because student's dropouts tended to believe they have no control over their own lives. Some students do not feel like they fit in, they may have felt unsafe. At this time in a student live schools is the most awkward place to be. Students will stay away from it if they can help it they will use any tactic including dropping out.

**Table 1: Primary School dropout rate by Standard and Gender**

<b>Standard</b>	<b>Boys</b>	<b>Girls</b>	<b>Total</b>
1	2.7	2.6	2.7
2	2.9	2.7	2.8
3	3	2.8	2.9
4	3.3	3.1	3.2
5	3.5	3.2	3.4
6	4.5	4.4	4.4
7	5.1	5.4	5.2
8	2.8	3.2	3
Total	3.2	3.2	3.2

## **CHAPTER THREE**

### **METHODOLOGY**

#### ***3.0 Introduction.***

This chapter puts forward the methods and techniques that were employed to collect and analyze data. It included research design, area of study, study population, sampling design, data collection instruments, processing and analysis and limitation of data.

#### ***3.1 Research design***

The researcher used both qualitative and quantitative methods of data collection analysis.

#### ***3.2 Area of study***

The study was carried out in Emuhaya District, because it was more accessible to the researcher. Most respondents were got from employees in different departments of the district headquarters.

#### ***3.3 Study population.***

The study population will be 4 (four) primary school with 150 students in Emuhaya division, Emuhaya district Kenya.

#### ***3.4 Sampling design.***

The researcher used purposive sampling technique to collect data from various departments. This was because the technique enabled the researcher to get information that let him to be more successful in his findings.

#### ***3.5 Data collection instruments***

The data collection instruments were self administered questionnaires, interviews and documentary review.

#### **Questionnaire**

A number of both open and closed questions were given to the cross section of respondents in order to facilitate information gathering,

meaning that the format of both closed and open questions were utilized check lists and enabled the researcher to consider all possible responses. The questionnaires were self administered to target respondents.

The questionnaires were performed because they could be stored for further references, they would give straight forward answers, and they were sometimes used in instances when the group was big and geographically scattered and thus easy evaluation.

### **Interviews**

Both structured and unstructured interviews were used to collect data from employees because the researcher had face to face interaction with the respondents and this also helped the researcher to explain to the respondents why the study was carried out.

### **Documentary review**

The method of documentary review involved reading documents related to labour relations and employee performance in local governments. They also provided valuable information on the relevance of labor relations in organizations.

### ***3.6 Data analysis and presentation***

After data was collected from the field it was analyzed both qualitatively and statistically in order to describe the results properly in a neat way. Data was analyzed using a micro soft excel program and presented in table, Pie chart and graphs in order to facilitate interpretation.

**CHAPTER FOUR.**  
**PRESENTATION AND ANALYSIS OF DATA**

**4.0 Introduction**

This chapter was about the presentation and analysis of data related to the effects of school drop out on academic performance of learners.

A total of 30 respondents was selected which included both male and female from different departments of the district.

**Table 3: Age of Respondents**

Age Group	Frequency ( $f_0$ )	Percentage (%)
Above 20	6	20
20-15	5	17
15-10	15	50
Below 10	4	13
Total	30	100

The data shows that the majority of the respondents studied were aged 15-10 with 50%. This implies learners majority of the learners are between upper and lower classes.

**Table 4: Sex of Respondents**

Sex	Frequency ( $f_0$ )	Percentage (%)
Male	15	50
Female	15	50
Total	30	100

The above table indicates that the number of males 15 (50%) was equivalent to the number of females 15 (50%) meaning that the district is gender sensitive by giving equal opportunities to both males and females.

Figure 1: Sex of Respondents

Source: Primary Data from the Field.

Table 5: Class of Learners

Class education	Frequency (fo)	Percentage (%)
Lower	10	40%
Upper class	20	60%

Source: primary data from the field.

The results in the table 4 revealed that the majority of the learners are in lower class with 40% and upper class with 60%. This implies that majority of the learners tend to drop out as they go to upper class mainly due to age factor.

**Table 6: Duration in the School**

	<b>Frequency (fo)</b>	<b>Percentage (%)</b>
1-2	4	15
3-5	6	18
6-7	5	17
8-10	15	50
11 and above	0	0
Total	30	100%

**Source:** primary data from the field.

The findings indicates that majority of the learners have stayed between 8-10 years in school with 50% and other 3-5 with 18%. This implies that learners who join late are more like to spend a lot of time in school as compare to those who join early.

**Table 7: Relationship between School Dropout and Academic Performance of**

Relationship between later entry and academic performance of learners.	Good	Fair	Poor	Total
Frequency (fo )	15	10	5	30
Percentage (%)	50	33	17	100

**Source:** Field Survey.

The findings indicated that there is a positive relationship between school drop out and academic performance. Majority of the respondents agreed that when learners drop out of school it can affect their concentration hence poor academic performance

**Figure 2: Relationship School Dropout and Academic Performance of Learners**

*Source: Field Survey*

**Table 8: The Impact of School Dropout on Academic Performance of**

<b>Impacts of school dropout on academic performance</b>	<b>Frequency</b>	<b>Total</b>
Drug abuse	5	17
Early pregnancy	4	13
Indiscipline	15	50
Misconduct	6	20
<b>Total</b>	<b>30</b>	<b>100%</b>

*Source: Field Survey.*

The result imply that majority of the respondent agreed that indiscipline is major impact of school dropout of learners with 50%. This implies that most learners who drop out of school became indiscipline which affects their academic performance.

**Table 9: Causes of School Dropout among Learners**

<b>Causes of school dropout among learners</b>	<b>Frequency</b>	<b>Total</b>
Indiscipline	6	20
poverty	15	50
Early pregnancy	4	13
Drug abuse	5	17
Total	30	100%

**Source:** *Field Survey.*

The result imply that majority of the learners drop out of school due to poverty with 50%, drug abuse with 17%, indiscipline with 20% and early pregnancy with 13%. This implies that most of the learners who come from poor families are more likely to drop out of school.

## **CHAPTER FIVE**

### **DISCUSSION , RECOMMENDATIONS AND CONCLUSION.**

#### ***5.0 Introduction***

This chapter presents conclusions got from previous findings, purpose and objectives of the study. This chapter also involves recommendations.

#### ***5.1 Discussion***

##### **The impact school dropout on academic performance of learners**

Findings indicate that school dropout has a major impact on academic performance of the learners (Table 7). This implies that when learners dropout of school their academic performance can be effected greatly. The impacts include: indiscipline, drug abuse, early pregnancy and poverty which hinder learner's academic performance drop and poor attitude. Schwartz (2003) also concur with the finding that school dropout has a negative impact on learners academic performance

##### **Relationship between school dropout and academic performance learners**

The study found out that there is a strong relationship between school dropout and academic performance (Table 6) this implies that the more learners' dropout of school the more academic performance is affected. Schwart (2003) concur with the findings that there is positive correlation between school dropout and learners academic performance. He argues that the more the students dropout the more performance is affected and the image of the school. He also urges that school dropout is associated with poverty, hunger, family breakdown and poor facilities at school.

##### **Causes of school dropout**

The findings revealed that the major causes of school dropout include poverty , indiscipline and drug abuse (table 8) this implies that majority

of the learners come from poor families which affects their ability to pay school fees, buy books, uniform and other reading materials hence affecting their academic performance.

### **5.2 Recommendations.**

Basing on the findings of the study, the following are recommended:

The government should support free primary education as away of helping learners from very poor families.

The government should support children with basic needs to enable their effective performance.

Schools should also support learners from poor families' with free food and free uniform.

The non-governmental organizations should also come up to support learners by paying their school fees and other scholastic materials.

The government should establish boarding schools in arid and semi arid areas. It should also build more classrooms for normal class capacity for teachers to be able to pay attention to individual cases of pupils.

The school teachers should help in guidance and counseling learners on the dangers of school dropout.

### **5.3 Conclusion.**

The data collected by the researcher revealed school dropout has a major impact of academic performance of learners. These finding also revealed that many schools face a problem of learner's dropout which affects their academic performance and schools image. School dropout increases early pregnancy, drug abuse, indiscipline etc

There was a positive correlation between school dropout and academic performance of learners. High drop of learners in schools affects their morally and academic performance. This is evidenced in early pregnancy, poor attitude to studies and low commitment to academic performance

Lastly, the major causes of school dropout evidenced in the study are poverty which affected learners to meet school expense and their basic needs such food and clothes. Due to poverty many learners have been forced to dropout of school without their desire.

### **5.4 Areas for further studies**

The study shall be widened to cover more on child abuse and academic performance of learners in primary schools.

QUESTIONNAIRE**

Dear respondent,

I am called Festus Rutto.K a student of Kampala International University conducting a research on the impact of school dropout and academic performance of learners. The purpose of this study is to fulfill the requirement for the award of a Degree education your participation will be highly appreciated.

NOTE: Your responses will be treated with the highest degree of confidentiality.

Thanks

**SECTION A**

Instruction: Tick where necessary

age

- (i) Below 20 years
- (ii) 20-15
- (iii) 15-10
- (iv) below 10

2. Gender status

- (i) Male
- (ii) Female

3. Duration in the school

- (i) 1-2 years
- (ii) 3-5 years
